Our family helping your family see better.

During a comprehensive eye exam our doctors need to evaluate the overall health of your eyes. With the **optomap[®] Retinal Exam**, we can screen for retinal complications including macular degeneration, glaucoma, and retinal holes or detachments. Our doctors highly recommend this test be done on every patient as it gives them detailed information about your eyes which is digitally documented.

This screening procedure can also detect systemic problems unrelated to the eye that may show signs in the retina such as diabetes, hypertension, cancer/tumors, auto-immune disorders, and others, earlier than possible with traditional methods.

Dilation is still required in cases such as diabetes and dilation may be required in cases such as cataracts or macular degeneration.

The optomap[®] Retinal Exam:

- ✓ Is as fast as taking a picture.
- ✓ **DOES NOT REQUIRE DILATING DROPS.** You may not need to be dilated today, potentially eliminating a 30-minute wait and avoiding side effects such as blurry vision for 4-6 hours and light sensitivity.
- ✓ Is saved in your file enabling our doctors to make important comparisons during your annual eye exam.

The screening photo is \$29.00. For any medical conditions, we will then take an enhanced photo which we will bill to your medical insurance.

I elect to have the optomap[®] Retinal Exam

I prefer a dilated exam of my retina (no additional fee)
